### **Precision Spine™ Reaffirms Commitment to Made-in-the-USA Manufacturing by Expanding Space and Adding 25 Jobs at Mississippi Manufacturing Facility**

**Pearl, MS – February 29, 2016** – While many U.S.-headquartered medical device manufacturers are moving their manufacturing operations to China and other overseas locations, Precision Spine, Inc. has reaffirmed its commitment to Made-in-the-USA manufacturing with the addition of a third building to its Pearl, Mississippi campus, expanding the total manufacturing facility footprint by 30% to just under 30,000 square feet of space and creating 25 new jobs. As part of the expansion, the company created space dedicated to the production of custom products, prototypes and instrumentation. Future plans call for incorporation of advanced technologies into the facility, including 3D printing, clean room packaging and sterilization, automated assembly processes, barcode scanning, and automated distribution.

“Made-in-the-USA is not a slogan at Precision Spine, it’s our core value,” said Chris DeNicola, Executive Vice President of Operations. “We continue to invest in the U.S. because of the quality of our workers and materials, as well as our commitment to advancing the economic well-being of our country. This commitment has led to our being one of the fastest growing spine companies in the U.S. over the last five years, funded by the profits and cash flow generated by the company. This manufacturing expansion will enable us to continue vertically integrating in-house production, warehousing and delivery right here in the United States so that we can bring new products and line extensions to the market faster and more cost-effectively. In fact, we are positioned to launch five major products, as well as three important line extensions.”

A key to the company’s continued commitment to Made-in-the-USA manufacturing is the near-future creation of an area dedicated to the production of sterile-packaged product. Precision Spine’s recently introduced Reform® HA Coated Pedicle Screw System is currently sterile-packaged at another U.S. plant. But later this year, the company will be launching other sterile-packaged products from its own facility, including our ShurFit® Coated ACIF (Anterior Cervical Interbody Fusion) Cage and our ShurFit® Coated T-PLIF (Transforaminal Posterior Lumbar Interbody Fusion) Cage.”

#### **About Precision Spine**

Precision Spine, Inc. is a privately held company headquartered in Parsippany, NJ with manufacturing facilities in Pearl, MS. Precision Spine is dedicated to providing innovative, quality spine products that are designed to help treat serious orthopedic medical conditions in a cost effective manner.
